

We are team yellow

We are also known as team Bee, Bio Engineering Experiments. We are obviously one of the Belgian teams that is participating in this project with you guys. We are very happy that we even could participate.

In our team there's 6 members: Febe, Lena, Sita, David, Tri Nhan and Ningbo (if you name them from left to right). Febe is quieter than the other I would say just like Ningbo and Sita. But if you learn them better and they start to get

comfortable around you, they're not so quite anymore. David and Lena are one of the louder ones in our group. And at least you have me, Tri Nhan, I have no idea what character I am, what I can tell you is that I laugh a lot but like A LOT. Honestly, I don't know why but I am just very optimistic, I guess. David is a very funny guy when it comes to English because his voice changes so much but that's normal, because my voice changes to. Lena has so much ideas in our project, most of the time when I come up with something, she just adds something even better to it. Sita is a very funny partner but she is a little bit shy when she doesn't know you but don't let that fool you, she has been super savage to me. Febe is going to be an artist I think, she draws a lot and is also shy when she doesn't know you well. But when she starts to loosen up, she is kind of weird but in a good way of course. Ningbo is a very smart kid but is very slow at doing things but at the end his work is almost always better, so he really puts quality over quantity. I think in our team everybody gets along really well, I mean I hope so.

So now we are programming the sensors in the lessons of STEM. Ningbo and Lena are doing the humidity and temperature sensor and they also must program the dust sensor. Sita and I are programming the other temperature sensor and we also have the CO2 sensor. At least David and Febe are working on the UV-sensor after that, they also have the fine dust sensor. We have also made an introduction video about Belgium, Leuven, our school and about ourselves. Hope you will like the video and we hope to see yours soon to. 😊
